

Can you help us with our research?

Views on using Technologies in Stroke Rehabilitation of the Arm and Hand

UNIVERSITY OF
Southampton

After a stroke many people experience problems using or moving their arm and hand. There are many **assistive technologies** (such as **splints, electrical muscle stimulation, rehabilitation robots** etc.) which aim to improve these problems.

We are running a study funded by the Government (National Institute for Health Research) to find out people's views about the use of assistive technologies in rehabilitation.

This is a great opportunity for stroke survivors and their friends, relatives or carers to influence the way rehabilitation for the arm and hand after stroke is provided. Your views are important to us whether or not you have direct experience of using these technologies.

We would like to invite you to complete our **questionnaire**.

If you have access to the internet the questionnaire can be completed online at: <http://tinyurl.com/atras-PACquestionnaire>.

Alternatively if you would like to be sent a paper-based version, or would prefer to complete the questionnaire by phone, please contact: Ruth Turk Tel: 023 8059 8928; e-mail: R.turk@soton.ac.uk. She can also answer any questions.
